1.Build a python code Assume get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

PROGRAM:

```
import random
```

```
while(True):
```

```
    a=random.randint(10,99)
```

```
    b=random.randint(10,99)
```

```
    if(a>35 and b>60):
```

```
        print("high temperature and humidityof:",a,b,"% ","alarm is on")
```

```
    elif(a<35 and b<60):
```

```
        print("normal temperature and humidityof:",a,b,"% ","alarm is off")
```

```
    break
```
